West Bengal, India

Angular developer with 4+ years of experience building complex, scalable web applications. Strong in reusable component architecture and configurable interfaces for different clients. Independently built and deployed a full-stack application with Java and Spring Boot.

Frontend Skills: Angular (standalone components and NgModules), TypeScript, JavaScript, RxJS, HttpClient, NgRx, Angular Signals, Angular Material, HTML, CSS, SCSS, Tailwind CSS, Bootstrap, Jasmine, Karma.

Backend (Independent Projects): Java, Spring Boot, Spring Security, MySQL, Redis.

Tools & Technologies: Git, GitHub Actions (CI/CD), Node.js, Angular CLI, RESTful APIs, Nginx, PM2.

Work Experience: Frontend Developer | Platform Commons:

April 2022 – Sep 2026 (Internship: Apr 2022 – Nov 2022; Full-time: Dec 2022 – Sep 2026).

Core Angular developer for a **multi-tenant** platform serving **15–20 lakh users**. Clients included MAD, SBI Foundation, Bhumi, Teach For India, Agastya, Innovation Guild, Misfyt, Gandhi Fellowship, U&I, and iVolunteer.

Key Contributions:

- Built a JSON-driven form system using Angular Reactive Forms, with multi-step forms, repeatable sections, validation, and draft save/resume for different tenants.
- Implemented role-based menus, routes, and route guards so administrators could control which pages each role accessed.
- Created a reusable data table component with search, sorting, filtering, pagination, customizable columns, and row selection for individual or bulk actions.
- Added branding settings for themes, logos, favicons, headers, and footers, letting administrators update each tenant's appearance without code changes.
- Developed authentication and user profiles, integrating APIs with HttpClient and RxJS. Also built NgRx-based language switching, lazy-loaded modules, and permission-based ApexCharts dashboards.
- Built subscription and billing features for administrators and users, including plans, add-ons, pricing, feature access, renewals, and expiry notifications.

Projects: Real-Time Social Platform Web App

<https://applab.arnabkhan.in/chat/global> · [Demo Video](#) · [Frontend](#) · [Backend](#)

Built a social platform where users find people, send connection requests, and **chat in real time**, privately or in the global chat. An **AI assistant** answers questions about the app and shares links to the relevant pages. Chat includes typing indicators, quoted replies, reactions, message editing and deletion, and unread indicators for direct messages. The app also has sign-in, editable profiles, server-rendered public profiles with link previews, and a telemetry dashboard for session activity and errors.

Tech Stack: Angular 21 (SSR), Angular Material, Tailwind CSS, Spring Boot, Spring Security, STOMP WebSocket, MySQL, Redis, Nginx, PM2, GitHub Actions. Deployed on a Linux VPS with automated CI/CD.
