

Arnab Khan

(Frontend Developer | Angular | TypeScript | JavaScript)

Phone: [+91 7407930967](tel:+917407930967) Email: arnabkhanxyz@gmail.com LinkedIn: <https://linkedin.com/in/khan-arnab>

GitHub: <https://github.com/arnab-khan> Portfolio: <https://arnab-khan.github.io>

Software Developer with 4+ years of experience building scalable web applications using Angular. Experienced in reusable component architecture, multi-tenant applications, and dynamic UI development. Currently expanding into Full-Stack development with Java and Spring Boot.

Skills:

Frontend: HTML, CSS, SCSS, JavaScript, TypeScript, Angular, Angular Material, RxJS, NgRx, Bootstrap, Tailwind CSS, Jasmine, Karma

Backend (Learning & Personal Projects): Java, Spring Boot, Spring Security, MySQL, MongoDB

Tools & Technologies: Git, GitHub Actions (CI/CD), Node.js, Angular CLI, RESTful APIs, Nginx, PM2

Work Experience:

Frontend Developer | Platform Commons:

April 2022 – Present (Internship: Apr 2022 – Nov 2022; Full-time: Dec 2022 – Present).

4+ years of experience working as a core Angular developer on the Volunteer Management System (VMS) used by multiple clients (tenants), with features dynamically configurable per tenant.

Key Contributions:

- Developed and maintained a **multi-tenant Volunteer Management System (VMS)** where features, UI, navigation, permissions, and workflows were dynamically configured through backend-driven tenant settings.
- Developed a **JSON-driven dynamic form** engine supporting **multi-step forms**, nested repeatable sections (e.g., education, work experience, languages), validation, and draft save/resume functionality.
- Developed a fully dynamic navigation system with **role-based access control (RBAC)**, configurable menus, **dynamic routing**, and **dynamic route guards**, allowing admin to manage menu visibility and page access for different user roles.
- Developed reusable UI components and utilities, including a **dynamic data table** component with sorting, filtering, and pagination, along with common form controls, cards, directives, pipes, and shared services to improve development efficiency, maintainability, and consistency across the application.
- Implemented a fully configurable **tenant-specific UI**, enabling platform administrators to customize branding, including themes, logos, favicons, headers, footers, and other branding elements without code changes.
- Built core application features including authentication, user profile management, multilingual support with dynamic language switching using **NgRx**, and **lazy-loaded modules** for better performance.
- Developed **role-based dashboards** using **ApexCharts**, dynamically rendering dashboard sections and charts based on permissions received from the backend API.

- Implemented a scalable **subscription and billing** module supporting configurable plans, add-ons, feature entitlements, pricing, and subscription lifecycle management. Built both platform administrator configuration tools and user subscription workflows, including renewal and expiry notifications.

Personal Projects:

1. Applab – Full-Stack Web App

Tech Stack: Angular (SSR), Angular Material, Tailwind CSS, Spring Boot, Spring Security, STOMP WebSocket, MySQL, Redis, Nginx, PM2, GitHub Actions.

Live Project: <https://applab.arnabkhan.in/chat/global>

Demo Video: <https://arnab-khan.github.io/images/projects/app-lab.mp4>

Source Code:

Frontend: <https://github.com/arnab-khan/applab-frontend>

Backend: <https://github.com/arnab-khan/applab-backend>

Built a full-stack web application using **Angular** and **Spring Boot** with secure **cookie**-based session authentication and implemented user authentication, profile management, unique username validation, profile image upload, and public user profiles.

Developed SEO-friendly public profile pages using **Angular SSR** with dynamic metadata for search engine indexing and rich link previews. Built a real-time global chat using **STOMP WebSocket** with live messaging, typing indicators, message editing/deletion, reactions, quoted replies, and live synchronization.

Designed RESTful APIs with **Spring Security**, **MySQL**, and **Redis**-backed session management for secure and scalable communication.

Deployed the application on a Linux **VPS** using **Nginx** and **PM2**, and implemented automated **CI/CD** pipelines with GitHub Actions.

2. Blog Application (MEAN Stack):

Live Project: <https://public-blogs.arnabkhan.in>

Source Code:

Backend: <https://github.com/arnab-khan/public-blogs-backend>

Frontend: <https://github.com/arnab-khan/public-blogs>

Built and deployed a full-stack blog platform using **MongoDB**, **Express.js**, **Angular**, and **Node.js**. Implemented secure **JWT**-based authentication, profile management, and **NgRx**-based user state management. Enabled users to create, edit, and delete blog posts while keeping all content publicly accessible. Developed interactive features such as likes and comments for authenticated users, along with RESTful APIs.
